Introduction

Measures of spatial distribution of deprivation have been developed and used in Northern Ireland since the 1970s, and have played a central role in terms of informing the targeting of resources to the most deprived areas in Northern Ireland. The latest set of indicators, released by NISRA on 23rd November 2017, will replace those published in 2010.

The purpose of this paper is to present additional analysis of spatial deprivation measures (NIMDM 2017) in relation to the **Small Area (SA)** geography located within Derry City and Strabane District Council (DCSDC) area. This paper should be read in conjunction with the initial release which examined deprivation at the **Super Output Area (SOA)** geography. This can be accessed via the link below:

[DCSDC NIMDM2017 \(SOA\)](#)

Deprivation statistics for Small Areas allow the identification of smaller pockets of deprivation than the results for Super Output Areas. On average, Super Output Areas can be split into 5 Small Areas.

Small Areas are ranked from the most deprived (rank 1) to the least deprived (rank 4,537). Rankings are available for each of 7 distinct types (or domains) of deprivation, which have been combined to produce an overall multiple deprivation measure (MDM) rank. The MDM ranks of the areas should be considered in conjunction with those for each of the 7 domains in order to gain a comprehensive picture of deprivation.

The new Small Area deprivation statistics can be used to:

1. Identify pockets of deprivation – Small Areas that are amongst the most deprived Small Areas, but lie within Super Output Areas that would not be considered most deprived, however defined;
2. Examine the variation in deprivation rankings of Small Areas within a Super Output Area, a District Electoral Area, or a Neighbourhood Renewal Area; and
3. Identify clusters of similarly deprived Small Areas that cross Super Output Area boundaries.

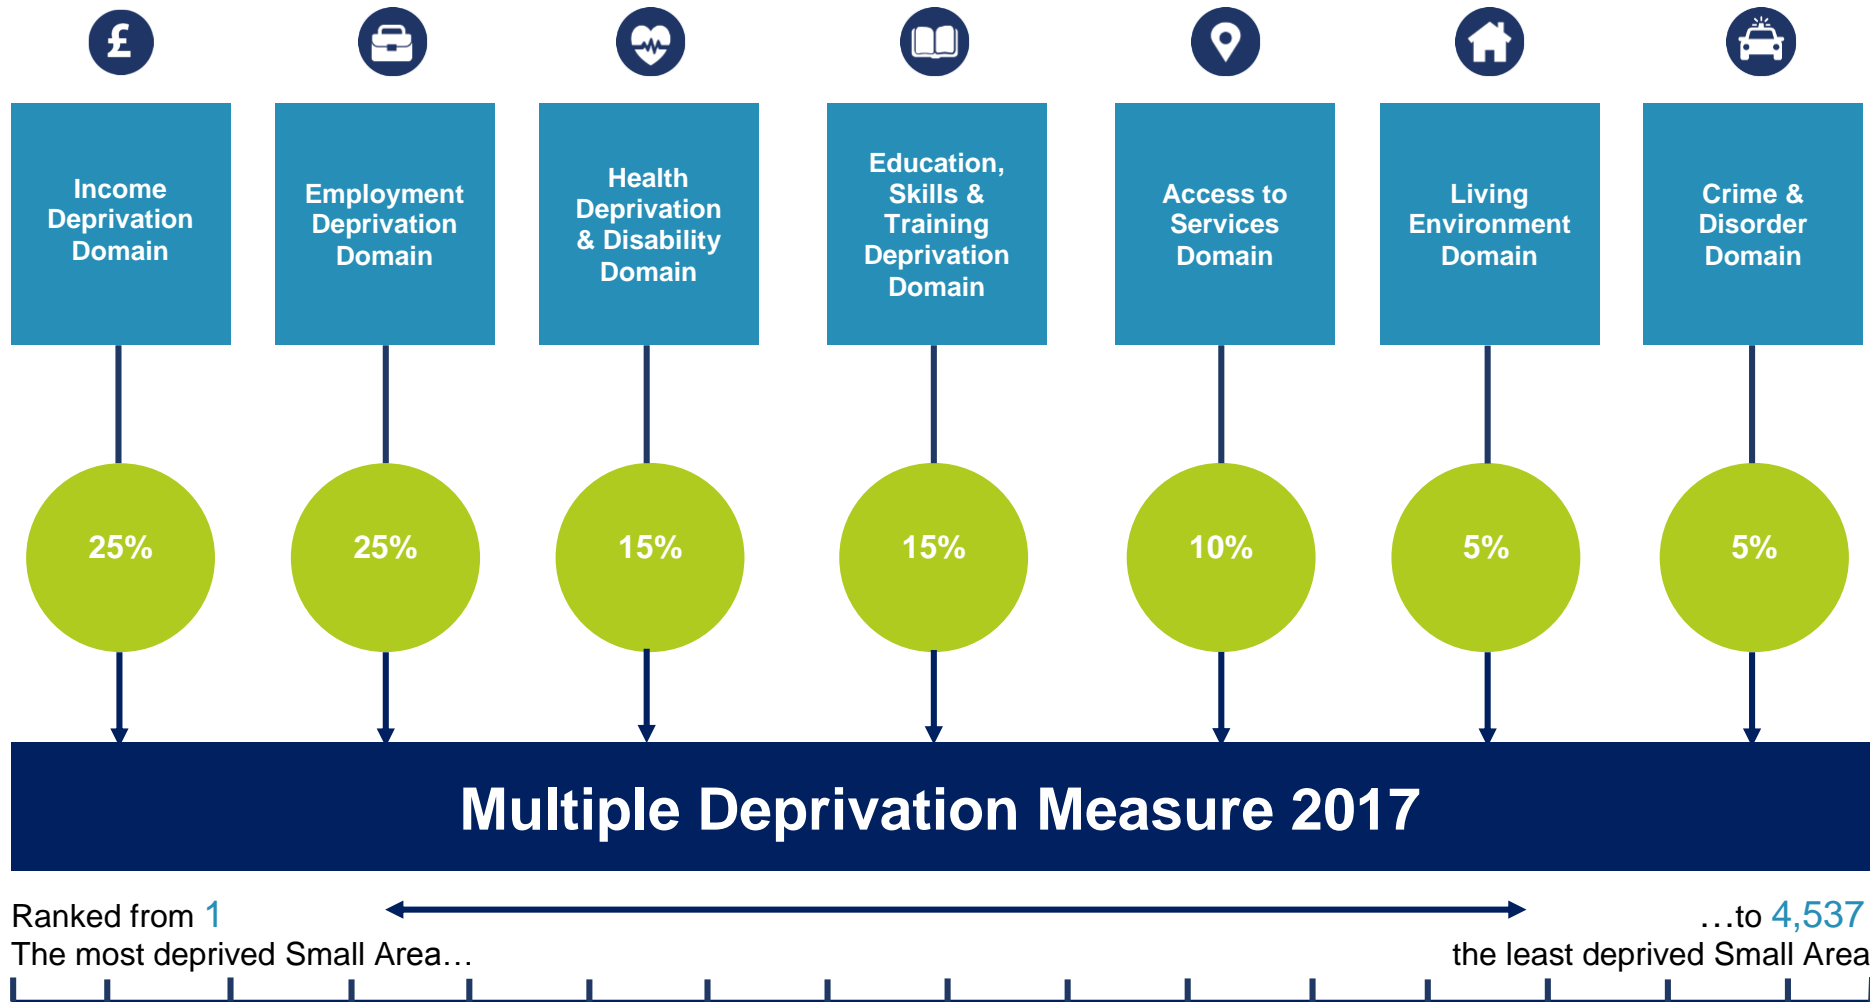

There are 328 Small Areas within DCSDC.

The maps and tables within this report provide a thematic representation of the relative levels of deprivation within the DCSDC Small Areas.

- Those DCSDC Small Areas that fall within the 10% most deprived Small Areas within Northern Ireland are shaded red  ;
- Those DCSDC Small Areas that fall within the 11% - 20% most deprived Small Areas within Northern Ireland are shaded orange  ;
- Those DCSDC Small Areas that fall within the 21% - 30% most deprived Small Areas within Northern Ireland are shaded yellow  .

A full list of the 328 Small Areas, categorized by DEA, Ward and deprivation domain are available in the appendices.

Seven Domains of Deprivation

How can the NIMDM 2017 measures be used?

What the NIMDM 2017 **can** be used for

For each **individual domain** of deprivation and the **overall MDM**, the rankings can be used to:

- ✓ Explore the relative deprivation of small geographical areas by comparing them with each other
- ✓ Explore which small geographical areas are the most or least deprived
- ✓ Examine the spatial distribution of small geographical areas that are the most or least deprived, however defined
- ✓ Explore which small geographical areas have joined, left or remained in the most or least deprived areas over time

What the NIMDM 2017 **cannot** be used for

- ✗ Identifying deprived individuals or groups of people – these are **area based** spatial measures
- ✗ Quantifying the extent to which a small geographical area is deprived – they provide **relative** rankings of areas
- ✗ Quantifying the extent to which one area is more or less deprived than another – they provide **relative** rankings of areas
- ✗ Assessing how absolute deprivation in a small geographical area has changed over time – they provide a **spatial ranking at a single point in time**
- ✗ Measuring affluence – lack of deprivation is not the same as being affluent
- ✗ Undertaking UK and RoI comparisons – each UK country has a different set of indicators, time periods, domains and domain weights. RoI measures deprivation using a different methodology.

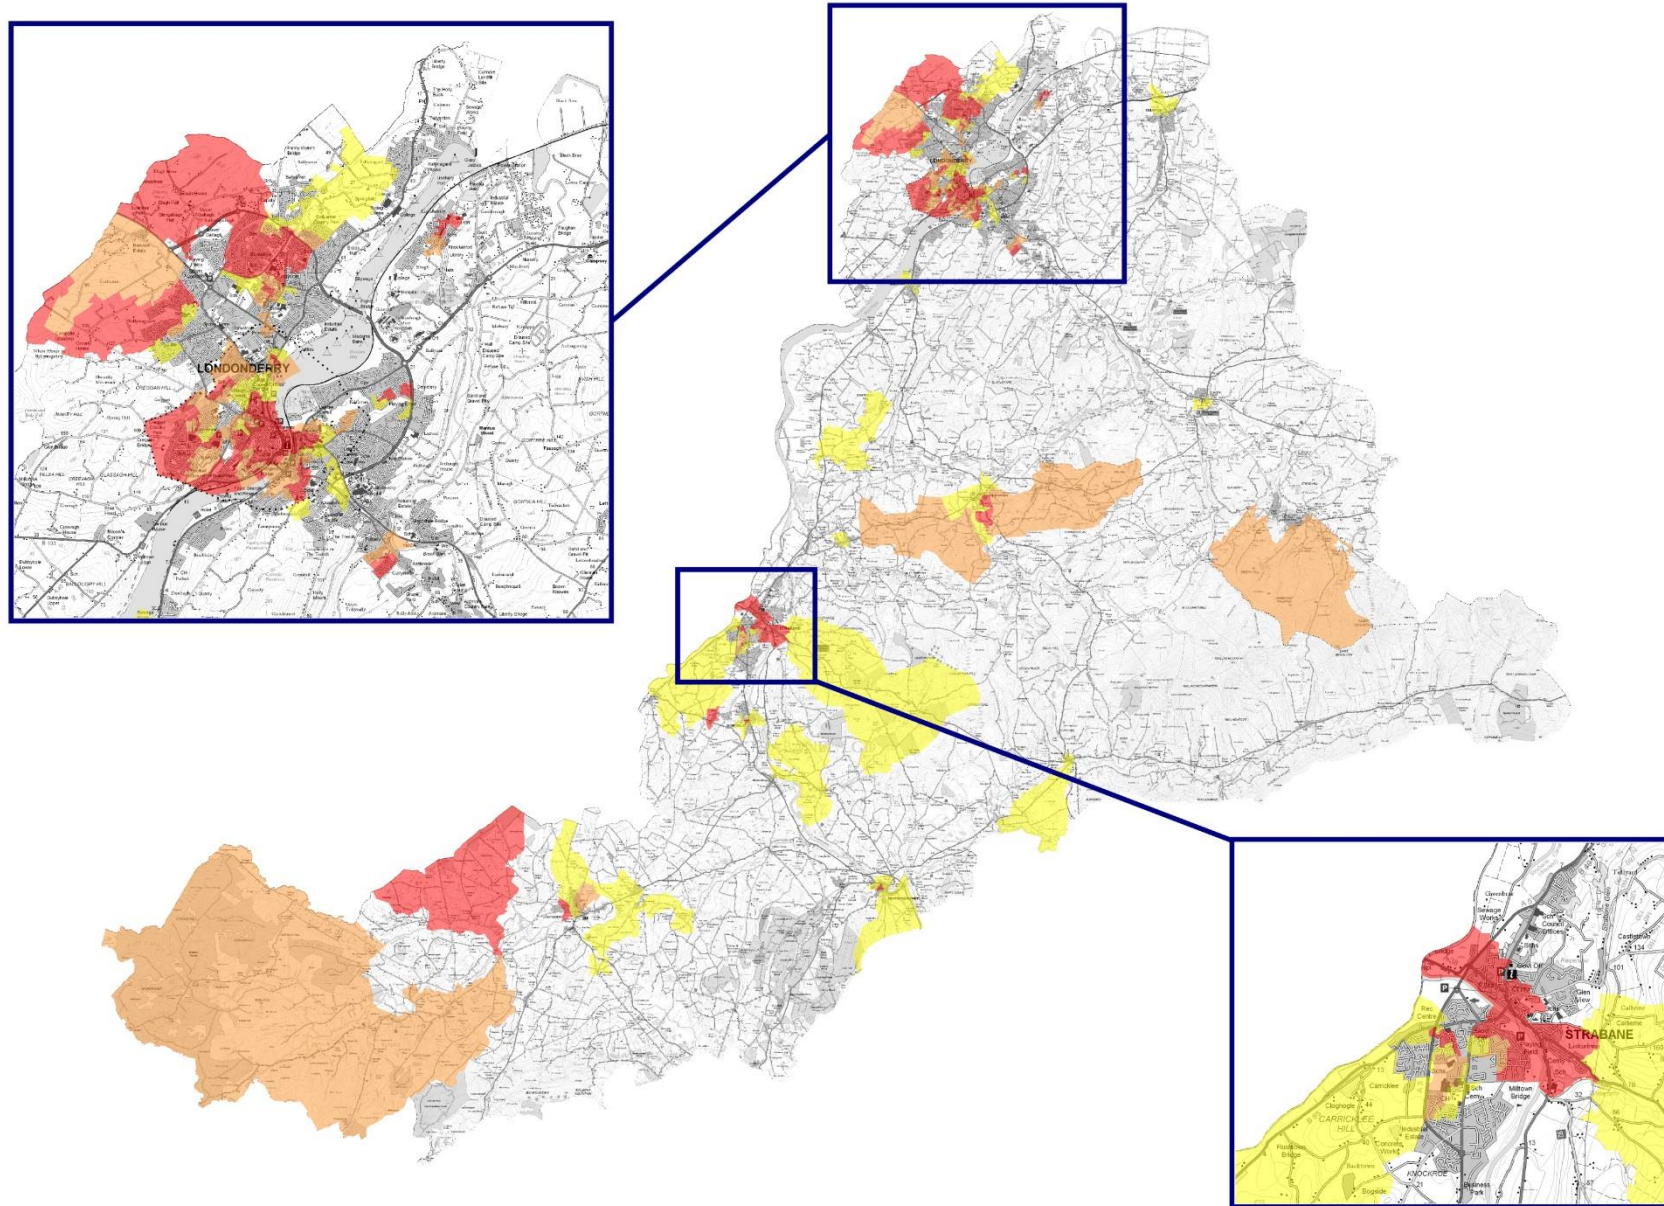

Main improvements in NIMDM 2017

- **Income Deprivation Domain:** Using income data instead of benefit data
- **Employment Deprivation Domain:** Including people with no income from employment, nor benefits associated with employment deprivation
- **Health Deprivation & Disability Domain:** Including people on multiple and repeat prescriptions to reflect complex and prolonged health needs
- **Access to Services Domain:** Using data relating to travel times to a wider variety of services by both private and public transport and access to broadband
- **Living Environment Domain:** New indicators on energy efficiency, road quality, flood risk, overcrowding and suitability of housing for the disabled
- **Crime & Disorder Domain:** Including an additional indicator relating to theft .
