- When compared to NI, a higher proportion of DCSDC employee jobs are concentrated in those sectors with high Public Sector involvement. This is due to the presence of a major hospital, university campus and regional technical college all in the Council area.
- As a result, nearly a third of employee jobs (30.8%) are in the 'Human Health and Social work' industry (20.3%) and the 'Education' industry (10.5%). In NI, just over a quarter (26.1%) of employee jobs are in the same industries.

- Across NI, the agricultural labour force has stabilized in the last number of years from an historic long-term downward trend in its size. It is believed that this stabilisation in numbers is not necessarily due to an increase demand for farm labour but more to difficulties in farm family members securing off-farm employment and to changes in Common Agricultural Policy support arrangements that link subsidies to some level of active farming.

As stated earlier, the annual surveys that record the number of employee jobs do not record the number of self-employed. Therefore the analysis, presented below, is taken from the Economic Briefing, NISRA.
